Colour Mating Chart

The colours covered here are the basic colours, Usual (dilute of Usual is Blue), Chocolate (dilute of Chocolate is Lilac) and Sorrel (dilute of Sorrel is Fawn).

DILUTE COLOURS

Dilute is recessive (needs to be carried by both parents). Where a Usual cat is mated to say a Blue, then for Blue offspring to be produced the Usual will need to carry dilute.

SILVERS

If you are breeding Silvers use the chart below and remember that Silver is a dominant gene, so if one of the parents is Silver, then Silver kittens can result from a mating. Usual is genetically 'Black' so 'Usual Silver' becomes 'Black Silver'.

SEX-LINKED RED

Please look in the Unusual Genetics section under Sex-Linked Red for full details on how to breed for these colours. Red and Cream cats still carry full colours although they do not show. However Torties do show one of the full colours.
